

HXG | INDEPENDENT RESEARCH

From Screen to Stay

A rights-aware, evidence-audited framework for connected hospitality experiences.

Working proposition: the in-room display can be treated as an orchestration layer connecting guest-facing capabilities, operational systems, and property-specific value questions.

SIX GUIDED PATHWAYS

Independent research. Rights-aware under the HXG source policy.

THE RIGHTS-AWARE RELEASE

A smaller evidence set. A stronger audit trail.

HXG v0.3.0 removes restricted statistics, commercial-research claims, and vendor evidence edges.

FRAMEWORK SCOPE

Original HXG analysis plus reviewed open-license and public-information sources. Every public source has a current machine-readable rights record.

INTERPRETATION CAVEAT

The pathways are analytical propositions for evaluation - not empirical guest preferences, causal findings, or universal product claims.

THE GUIDED EXPERIENCE MAP

Six capabilities. Six questions to validate.

Each one-to-one pathway uses the bounded verb can support. The relationship IDs resolve to original HXG analytical claims and explicit limitations.

PROPERTY-SPECIFIC VALUE

Use formulas to expose assumptions - not to imply ROI.

PROPERTY-SPECIFIC VALUE MODELS

Ancillary contribution	Eligible occupied room nights x measured engagement x incremental conversion x contribution margin.
Energy value	Verified baseline x controllable share x measured attributable reduction.
Operational support	Verified remote resolutions x measured avoided dispatch cost.
No universal rate, uplift, saving, conversion, or ROI is supplied. Every input, counterfactual, and attribution decision belongs to the property.	

STAKEHOLDERS AND VALIDATION

Every stakeholder owns a different proof burden.

WHO EXPERIENCES

Guest

- Can people use it?
- Does it reduce friction?
- Are privacy and access clear?

WHO OPERATES

Owner, operator, brand

- Does it fit service standards?
- Can teams support it?
- What changed locally?

WHO ENABLES

Technology ecosystem

- What is actually available?
- How is it integrated?
- Who governs lifecycle risk?

WHO VALIDATES VALUE

Property and guest research

- Baseline and counterfactual
- Attribution and incrementality
- Direct outcome measurement

HXG maps questions and responsibilities. It does not assign revenue, savings, or guest outcomes to a stakeholder without local evidence.

PUBLICLY DOCUMENTED VENDOR EXAMPLE

Samsung Hospitality - links, not evidence.

METADATA-ONLY OUTBOUND LINKS

INDEPENDENCE DISCLOSURE

Samsung is referenced descriptively through publicly available product links. HXG is independent and is not sponsored, endorsed, reviewed, or approved by Samsung.

RIGHTS POLICY AND LIMITS

Confidence includes permission to use the source.

Direct fact

A paraphrased statement from a reviewed open source.

Supported inference

An HXG proposition linked to evidence and limitations.

Modeled scenario

A transparent formula awaiting property inputs.

CONTRADICTIONS AND LIMITATIONS

Analytical pathway is not preference evidence

A formula is not ROI

Accessible intent is not conformance

Security controls do not guarantee perception

MAJOR LIMIT

Unknown, denied, missing, or expired rights fail closed before retrieval. Vendor links stay outside cache, model context, claims, and graph relationships.

METHOD AND OPEN AUDIT

Audit the chain. Challenge the framework.

LIVE EVIDENCE EXPLORER

<https://lohanstruwig.github.io/hxg/>

Release 0.3.0 is a deterministic rights-policy rebuild with disclosed human governance. Models did not run. Python owns validation, counts, graph exports, and publication files.

Evidence cutoff: 2026-08-19 | Audit the IDs, sources, limitations, and code.
