

HXG | INDEPENDENT RESEARCH

# From Screen to Stay

An AI-led, evidence-audited map of connected hospitality experiences.

The in-room display is becoming an experience-orchestration layer connecting guest comfort, property operations, and ecosystem value.

SIX GUIDED PATHWAYS

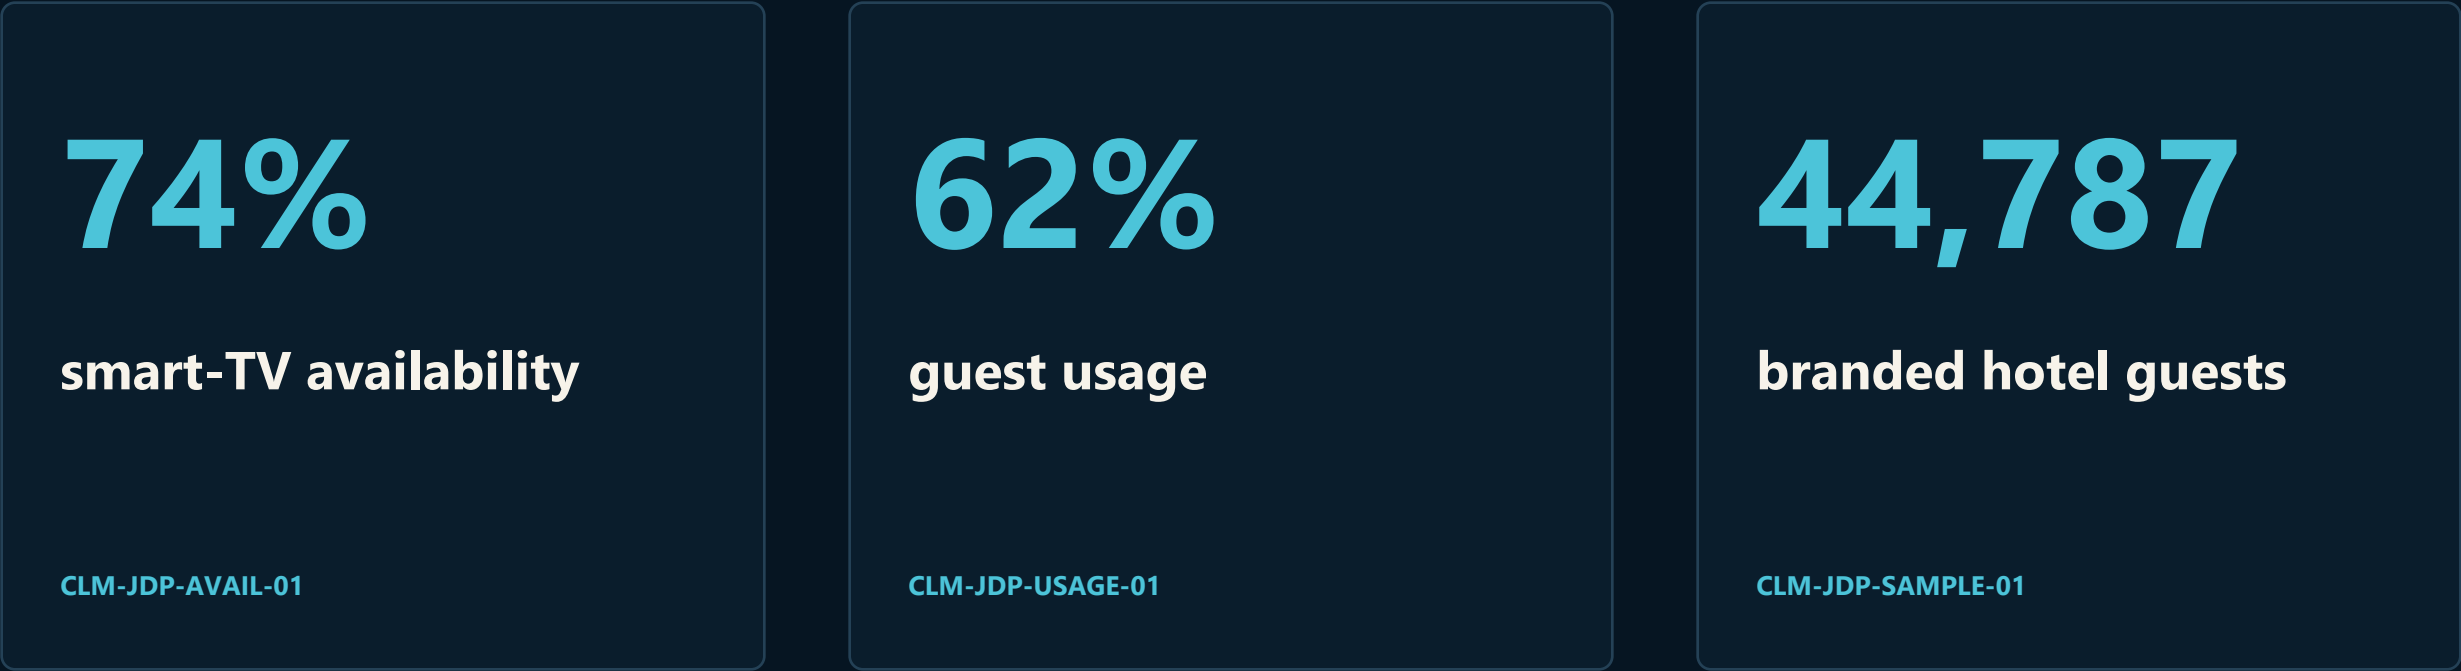

Independent research. No Samsung sponsorship or endorsement.

INDEPENDENT GUEST EVIDENCE

The screen is already a consequential touchpoint.

J.D. Power | 2026 North America Hotel Guest Satisfaction Index Study

SOURCE SCOPE

North America, branded hotels, stays from May 2025 through May 2026. The sample is not every hotel room or every guest segment.

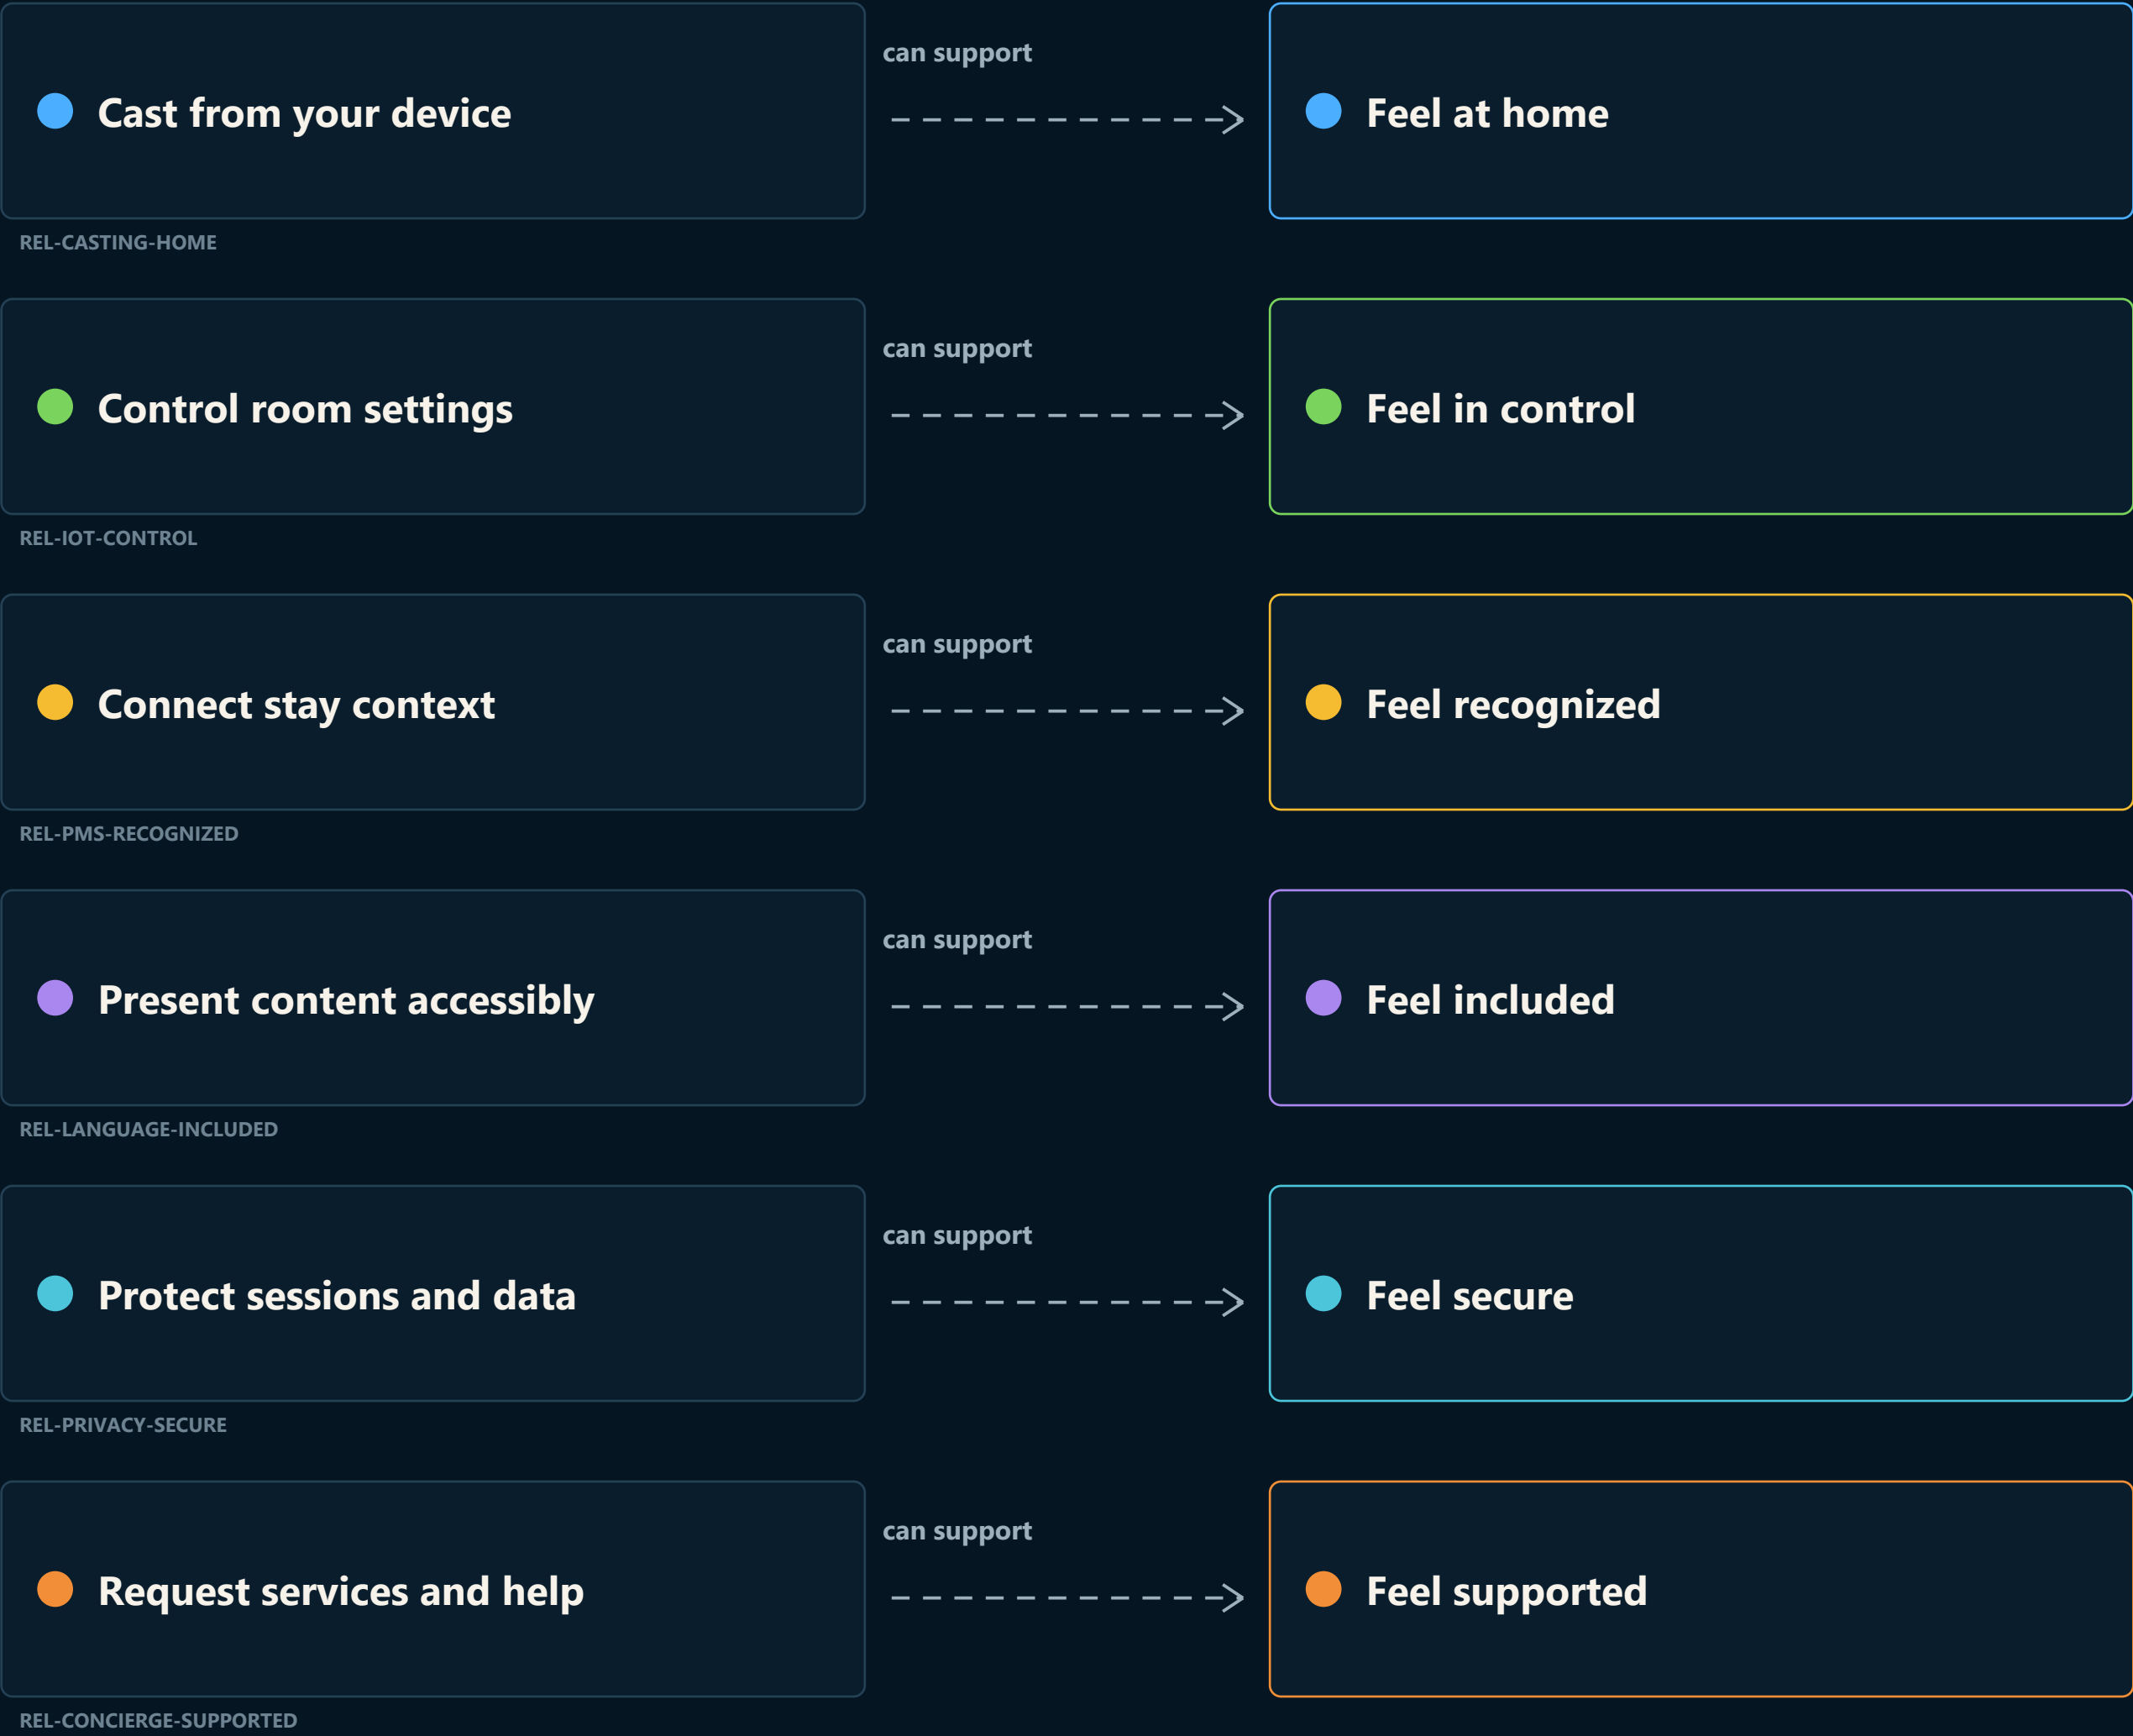

CAUSATION CAVEAT

Availability and use establish relevance - not causal satisfaction, loyalty, revenue, or a universal guest outcome.

THE GUIDED EXPERIENCE MAP

Six capabilities. Six guest outcomes.

Each one-to-one pathway uses the deliberately bounded verb can support. Select the evidence IDs in the live explorer to inspect confidence and limitations.

VALUE PATHWAYS

Human value first. Property value must be measured.

PROPERTY-SPECIFIC VALUE MODELS

|                                                                                                                                                                                    |                                                                                                 |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------|
| Ancillary contribution                                                                                                                                                             | Occupied room nights x engagement x conversion x margin. Incrementality must be tested locally. |
| Energy savings                                                                                                                                                                     | Baseline spend x controllable share x verified reduction. No universal savings rate is claimed. |
| Support savings                                                                                                                                                                    | Remotely resolved incidents x avoided dispatch cost. Avoided visits must be measured.           |
| ENERGY STAR reports energy at about 6% of lodging operating costs and heating/cooling at almost 40% of electricity use. This is current agency guidance, not new 2026 measurement. |                                                                                                 |

STAKEHOLDER AND ECOSYSTEM VALUE

# Value changes depending on who is looking.

WHO EXPERIENCES

## Guest

- Comfort and control
- Inclusion and privacy
- Convenient access to help

WHO OPERATES

## Owner, operator, brand

- Experience consistency
- Cost and support visibility
- Measured property scenarios

WHO ENABLES

## Technology ecosystem

- OEM and platform
- Dealer and integrator
- PMS, POS, IoT, content, services

WHO CAPTURES VALUE

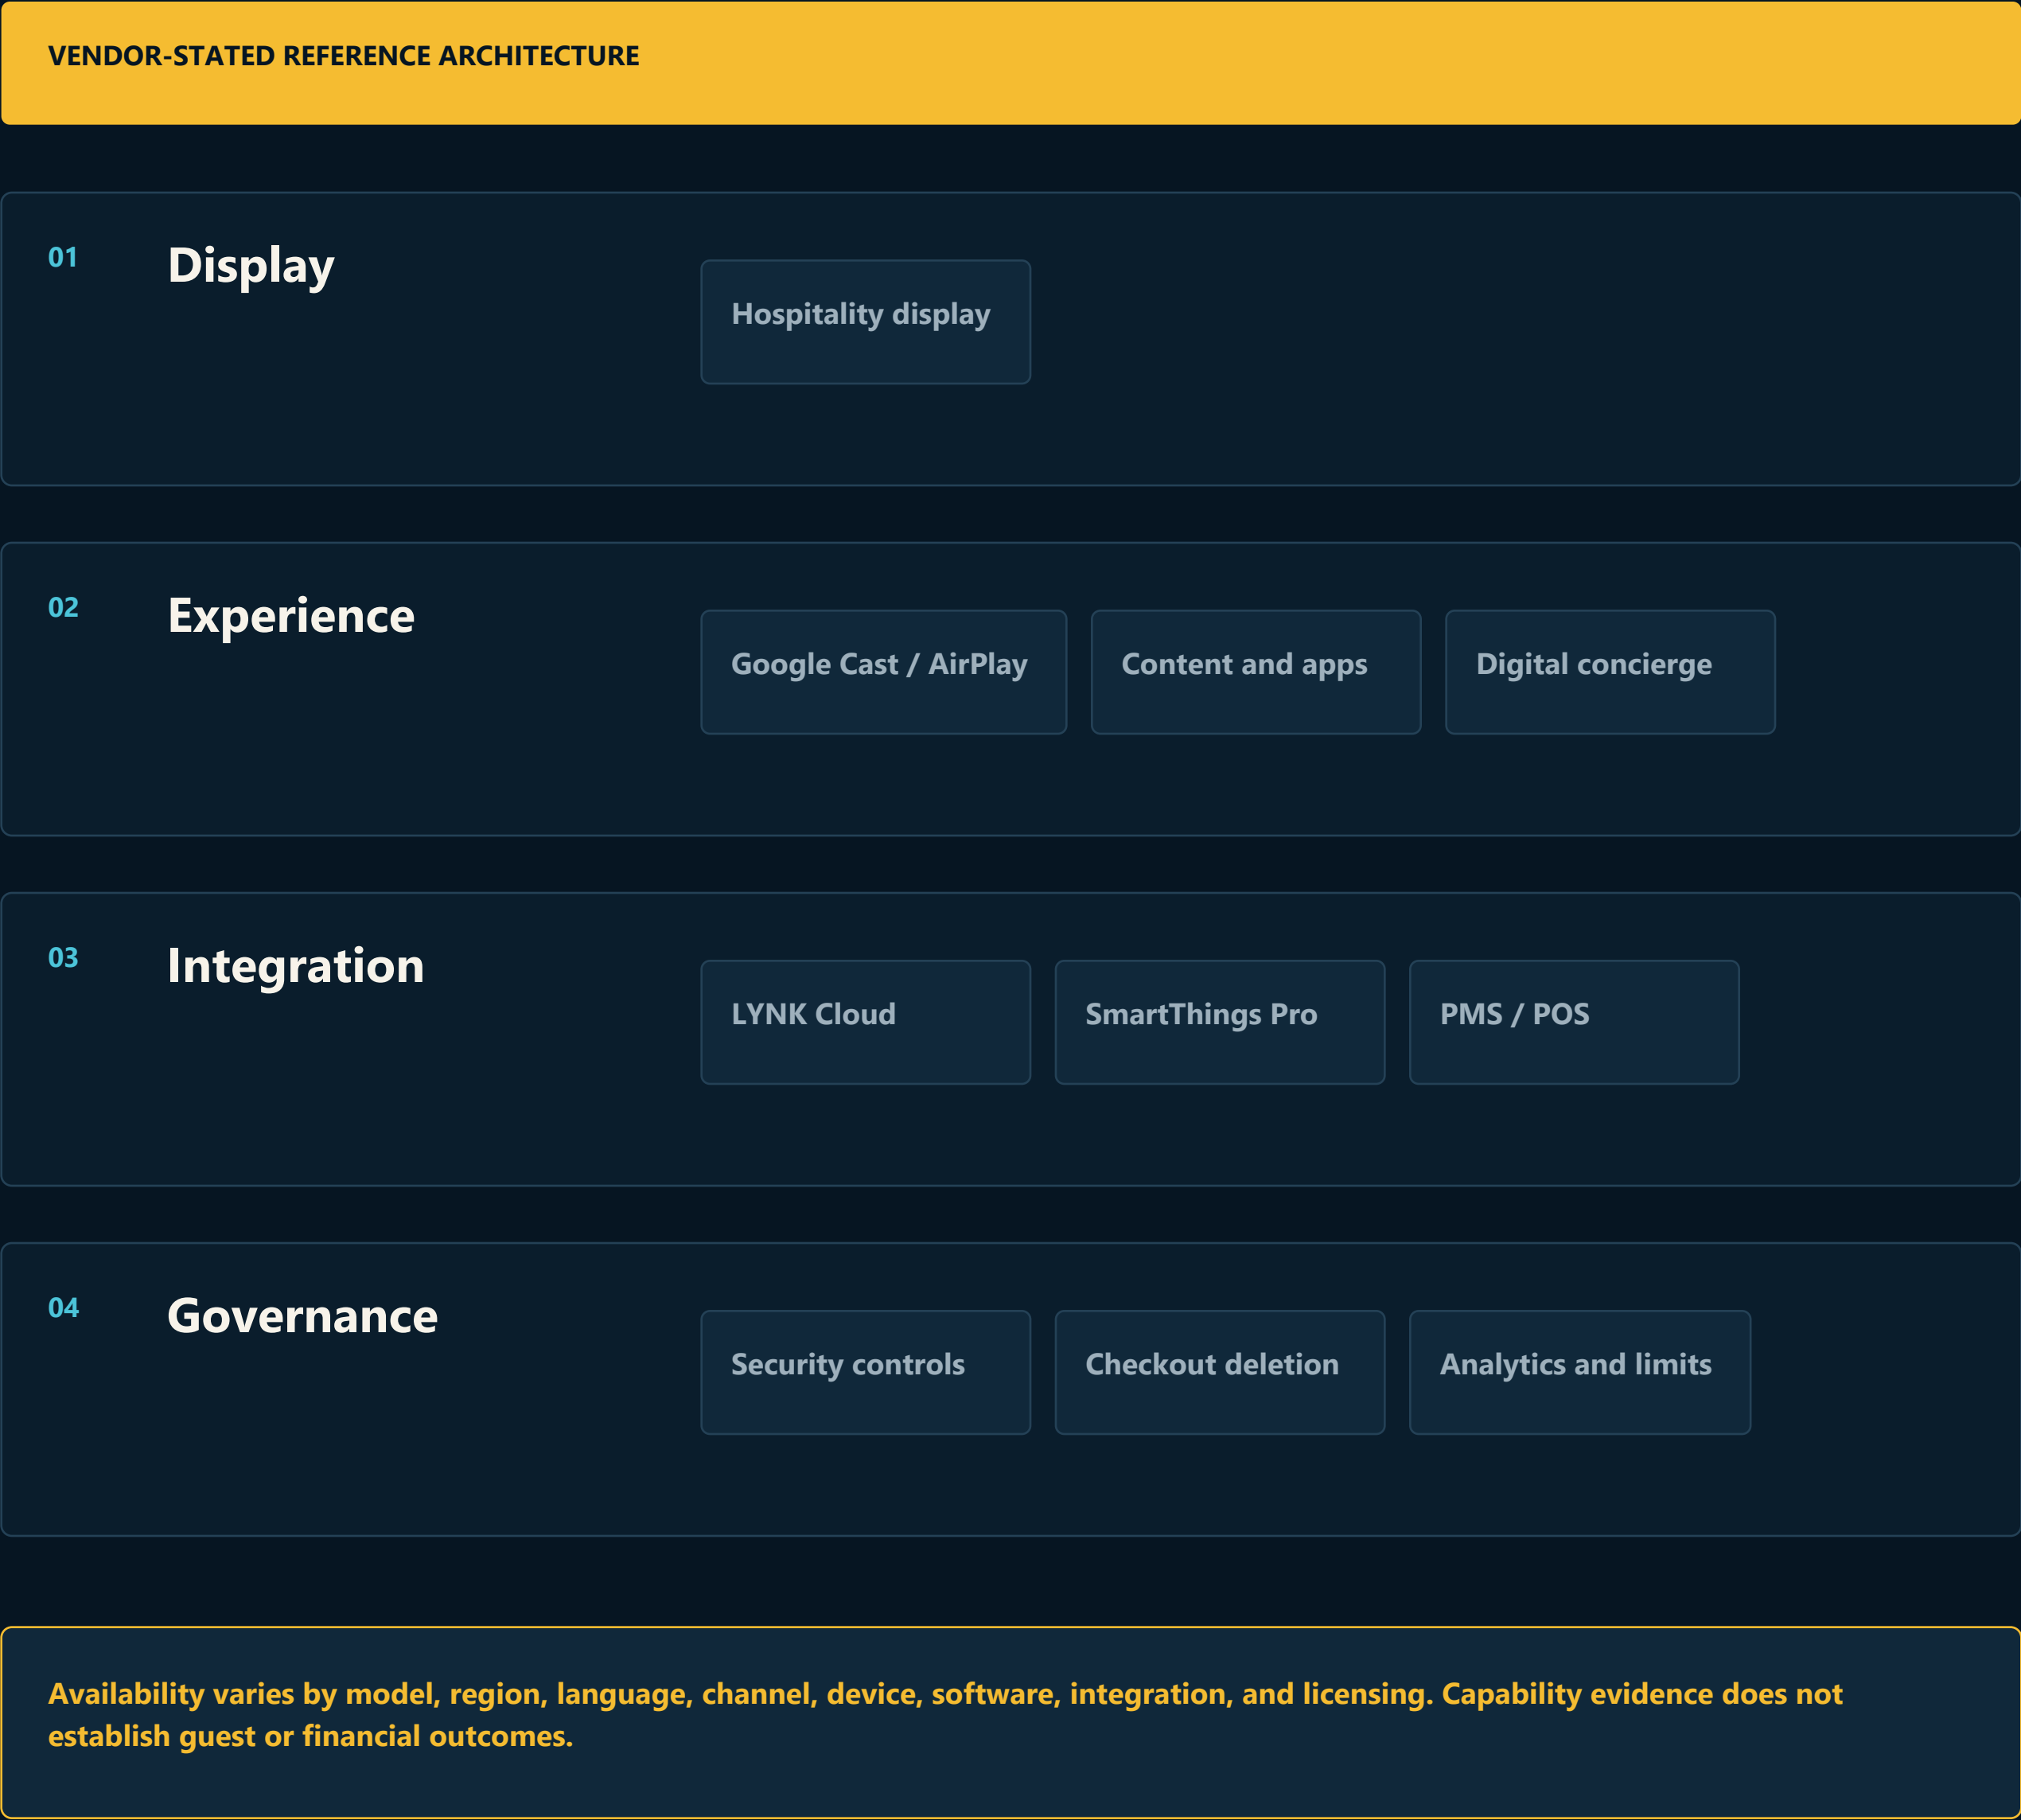

## Different mechanisms

- Human outcomes
- Property-specific economics
- Hardware, software, service, support

Nearly \$805B in projected 2026 U.S. hotel guest spending is economic context - not revenue attributable to in-room screens.

SAMSUNG REFERENCE CASE

One vendor-stated architecture.  
Four clear layers.

CONFIDENCE AND CONTRADICTION AUDIT

Confidence is part of the finding.

Direct fact

LYNK Cloud supports central device management.

Supported inference

Room controls can support a sense of control.

Modeled scenario

Avoided visits x local dispatch cost = potential savings.

CONTRADICTIONS AND LIMITATIONS

Usage is not satisfaction or causal value

Announcement is not universal availability

Translation is not complete accessibility

Industry scale is not attributable revenue

MAJOR LIMIT

Vendor capability evidence can support a bounded pathway, but it does not prove the guest's perception or the property's financial result.

METHOD AND OPEN EVIDENCE

# Audit the chain. Reuse the graph.
