

HXG · INDEPENDENT RESEARCH

From Screen to Stay

An AI-led, evidence-audited map of connected hospitality experiences.

The in-room display is becoming an experience-orchestration layer connecting guest comfort, property operations, and ecosystem value.

Independent research · No Samsung sponsorship or endorsement

INDEPENDENT GUEST EVIDENCE

The screen is already a consequential touchpoint.

J.D. Power · 2026 North America Hotel Guest Satisfaction Index Study

CLM-JDP-SAMPLE-01

Availability and use establish relevance—not causal satisfaction, loyalty, or revenue.

THE EXPERIENCE MAP

Six outcomes. One human center.

VALUE PATHWAYS

Value starts human. Property value must be measured.

Human value

Time saved · reduced effort · familiarity ·
comfort · accessibility · control · trust

Property value

Ancillary contribution · remote support ·
energy efficiency · experience indicators

PROPERTY-SPECIFIC MODELS

Ancillary contribution = occupied room nights × engagement × conversion × margin

Energy savings = baseline spend × controllable share × verified reduction

Support savings = remotely resolved incidents × avoided dispatch cost

ENERGY STAR: about 6% of lodging operating costs are energy; heating and cooling account for almost 40% of electricity use. Current agency guidance—not new 2026 measurement.

ECOSYSTEM VALUE

The screen succeeds through relationships—not specifications alone.

Guest

Comfort · control · inclusion · privacy · service

Owner / operator

Revenue pathways · cost visibility · consistency

Brand / manager

Standards · content · portfolio scale

OEM / platform

Hardware · software · cloud · support

Dealer / integrator

Design · install · integrate · train

Technology partners

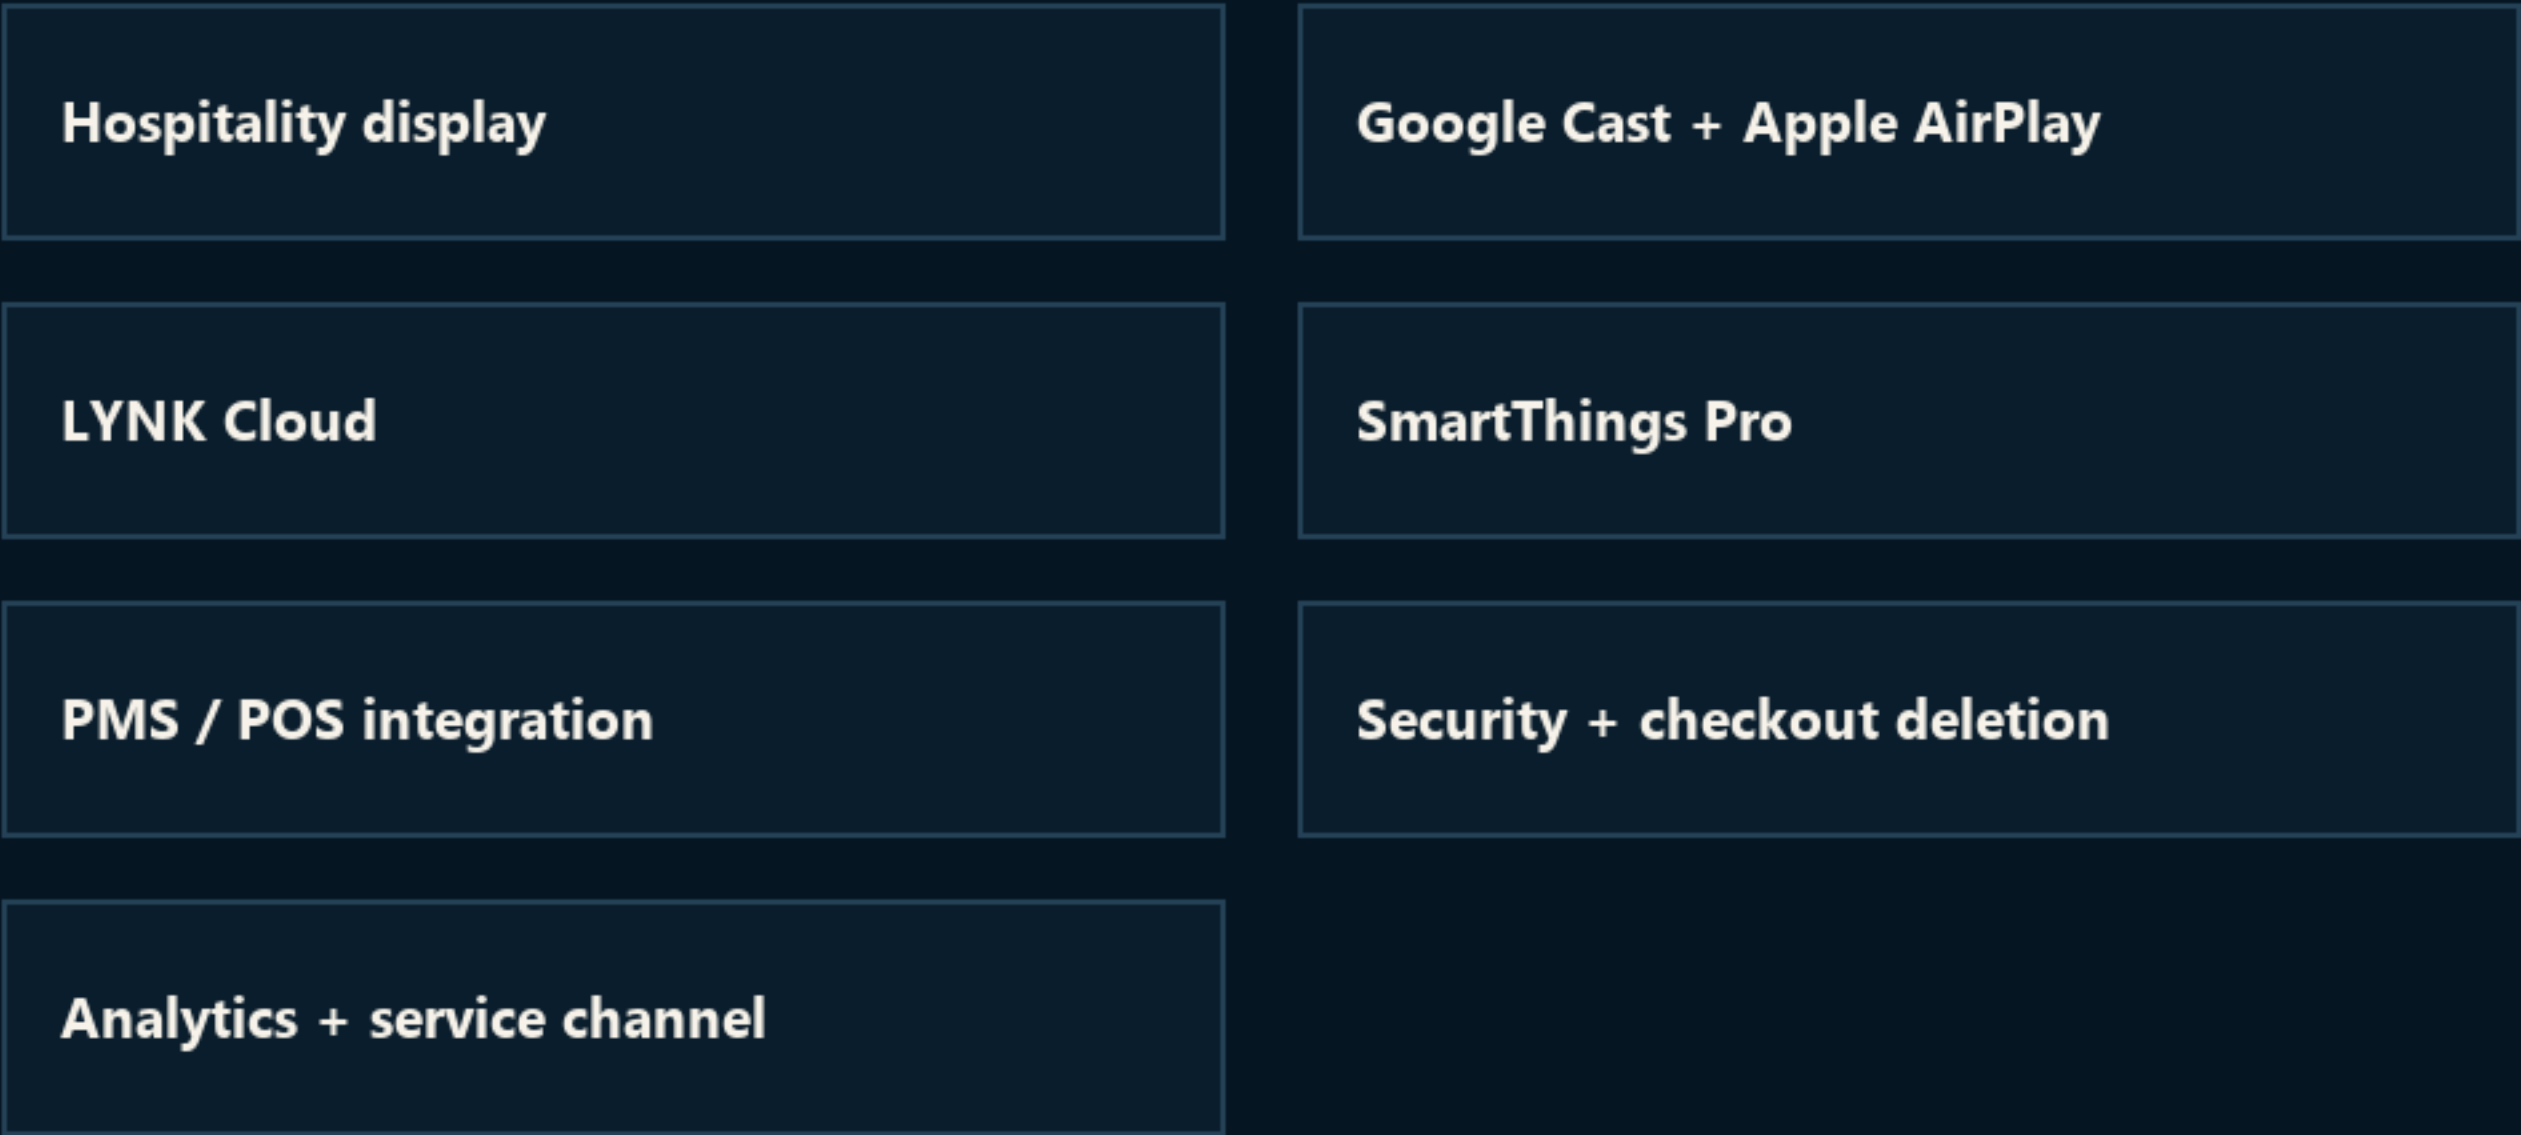

PMS · POS · IoT · content · services

Nearly \$805B projected U.S. hotel guest spending in 2026 is economic context—not screen-attributable revenue.

VENDOR-STATED REFERENCE ARCHITECTURE

Samsung is one reference case—not the owner of the research.

Samsung documentation shows how display hardware, cloud management, casting, IoT, PMS-connected services, security controls and analytics can form one hybrid stack.

Availability varies by model, region, language, channel, device, software and licensing. Capability evidence does not establish guest or financial outcomes.

CONFIDENCE + CONTRADICTION AUDIT

Confidence is part of the finding.

Direct fact

LYNK Cloud supports central device management.

Supported inference

Remote visibility may reduce some on-site interventions.

Modeled scenario

Avoided visits × local dispatch cost = potential savings.

CONTRADICTIONS RECORDED

✗ Usage ≠ satisfaction or causal value

✗ Announcement ≠ universal availability

✗ Translation ≠ complete accessibility

✗ Industry scale ≠ attributable revenue

METHOD + OPEN EVIDENCE

Audit the chain. Reuse the graph.

Discover → Extract → Resolve → Connect → Challenge → Audit → Freeze → Publish

Release 0.1.0 is an interactive Codex-assisted seed audit with disclosed human governance. The configured local pipeline uses manager-led specialist agents and Microsoft GraphRAG; deterministic Python owns validation, counts and exports.
